A/B language switching for interpreters

How interpreters can easily switch between languages if more than one language is spoken on stage.

Features RSI Live Translation Admin Speaker
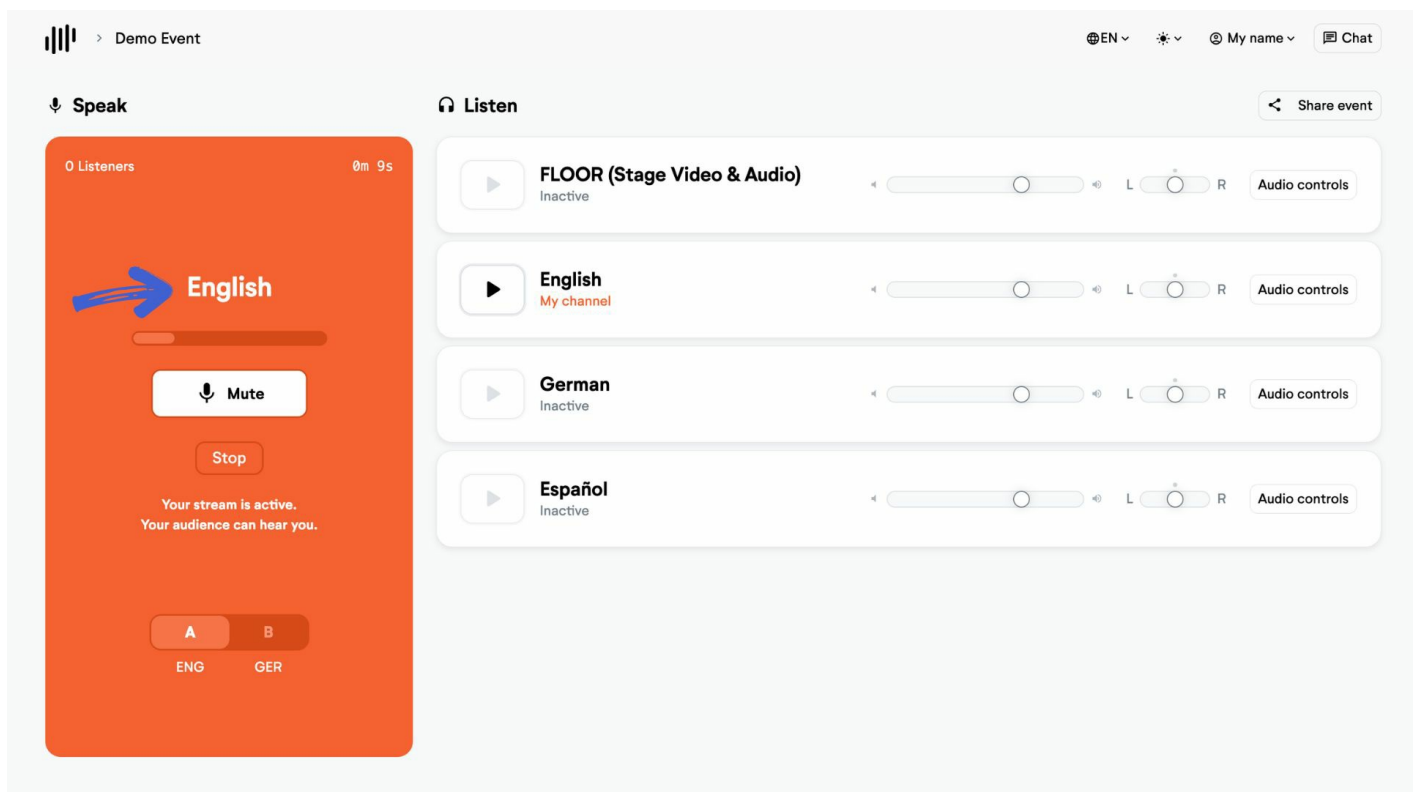

Available in: PRO

Activate this feature if you want to use LiveVoice for simultaneous interpretation and there are two or more languages spoken on stage (e.g. at a panel discussion).

Like on traditional hard consoles that interpreters are used to, you can provide A/B buttons in the soft console, so they can quickly switch the language channel they speak into. You can also add more than two languages and add as many language groups as you want.

The feature needs to be set up by the event admin beforehand to be able to use it at an event. Available in LiveVoice PRO.
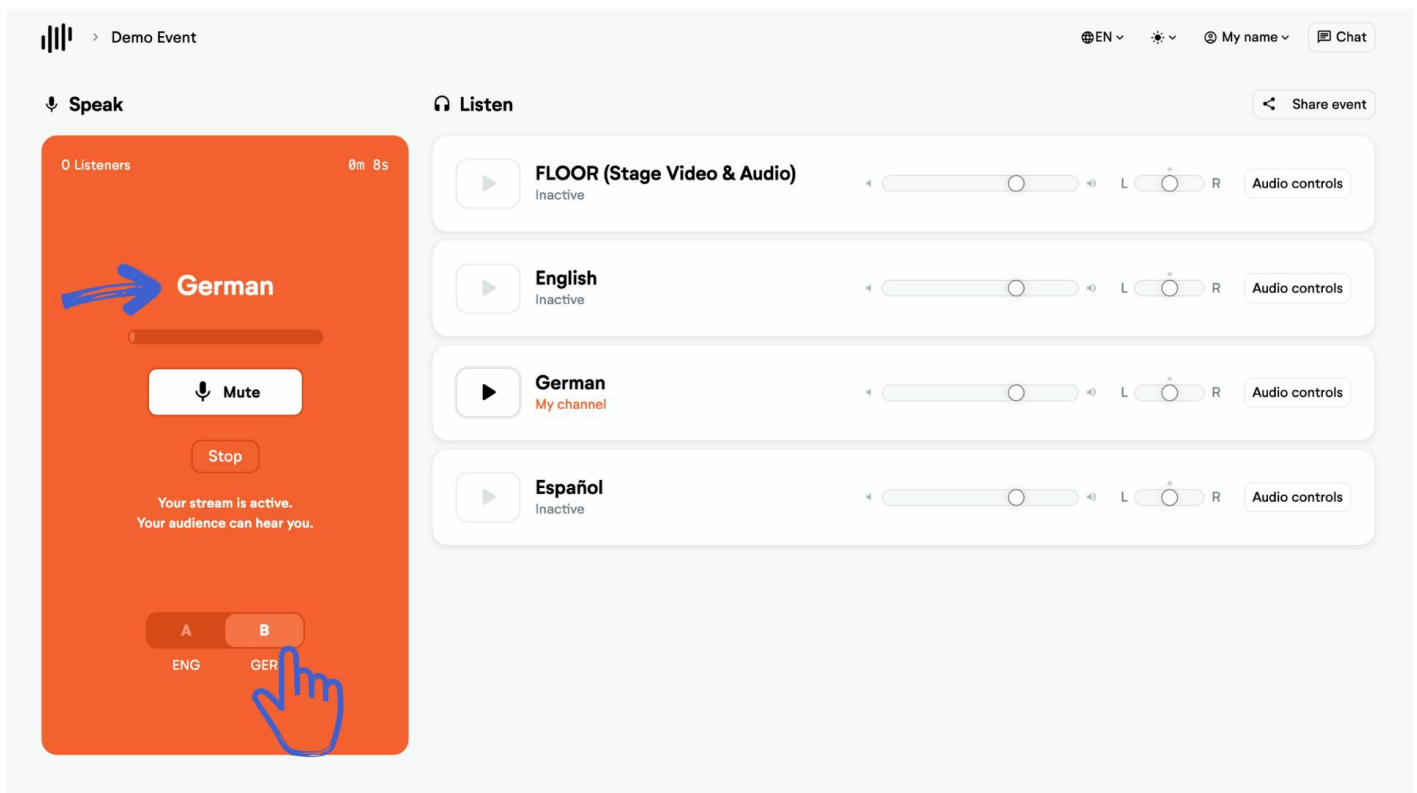

Example
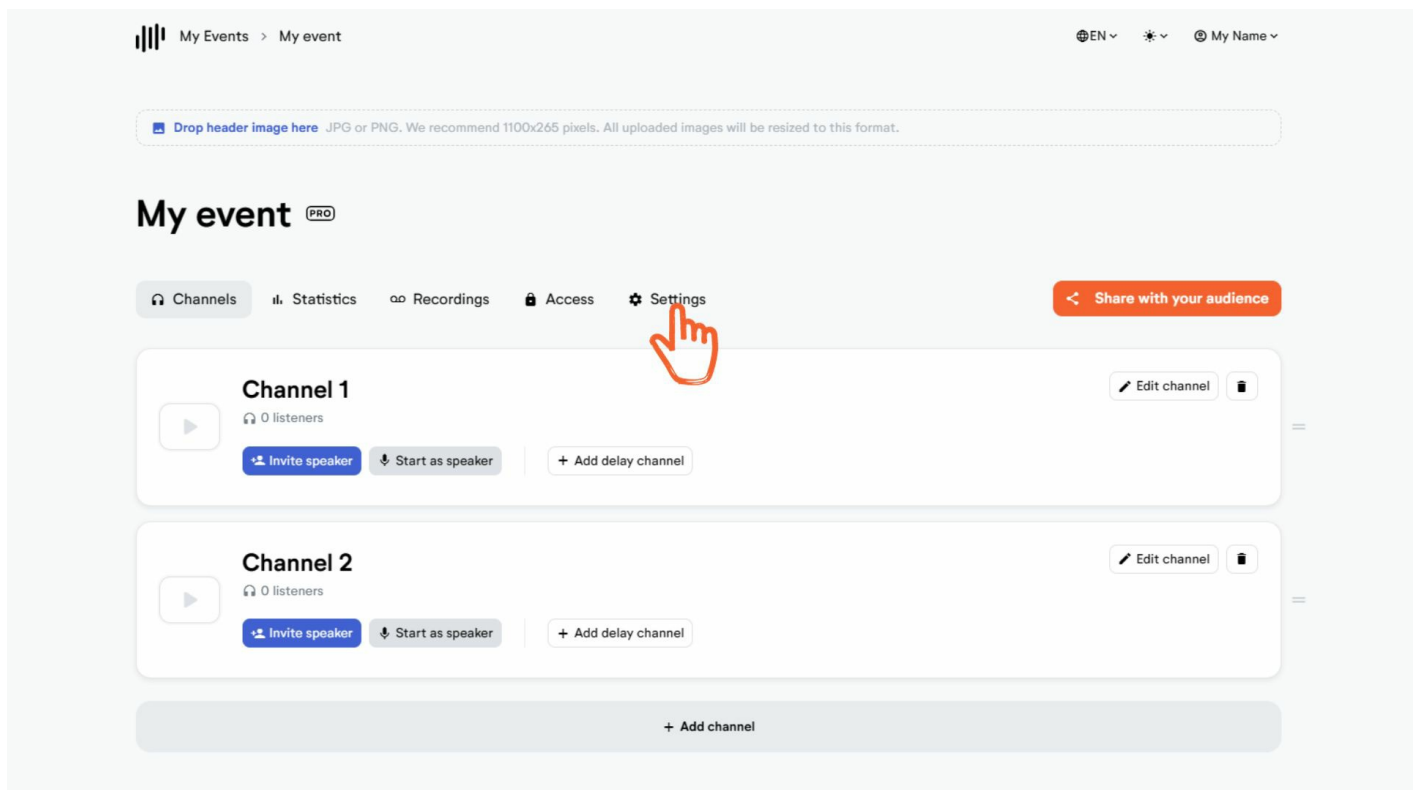

Interpreting into English

Click on B button (GER):

Now interpreting into German

Setup

As an admin you can define for each channel a second (B) channel. You can also add more channels (C, D, …).

1: Go to your event in the admin account and to the tab "Settings"

2: Activate the "Speaker channel switching" option and define the channels you need.

You can add also additional groups if needed. Click "Update" when you are done.
