

Streaming multiple channels from one computer

Want to send multiple audio streams from one computer to LiveVoice? Here's how.

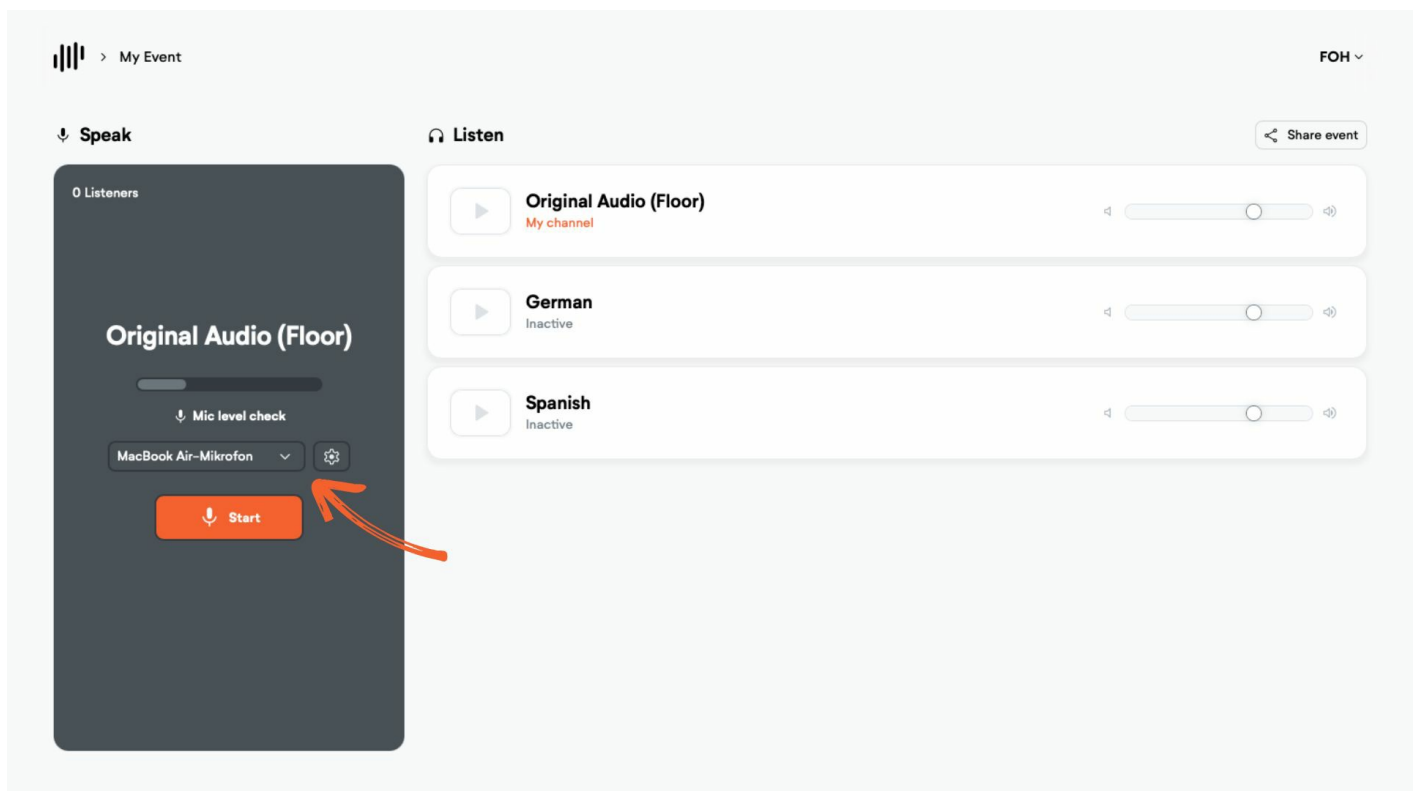

[Advanced](#)[Ingest audio](#)[Live Translation](#)[Silent Conferencing](#)[Admin](#)[Operator](#)

Usually, each audio channel is being sent by one device (computer or smartphone). But in some cases you might want to use only one device to stream multiple audio channels. For example when using several interpretation hard consoles, and you want to ingest all of their audio signals to just one computer.

Here are two options how you can do this.

Option 1: Using multiple tabs in one browser

1. Open browser and allow mic input
2. Choose audio input source
3. Start the stream
4. Open a new tab (or window) and continue to do so with each channel

Option 2: Patchbay by LiveVoice

Use our app "Patchbay" that is made for professional use. [Learn more here.](#)
