

Trigger/pause AI by participants

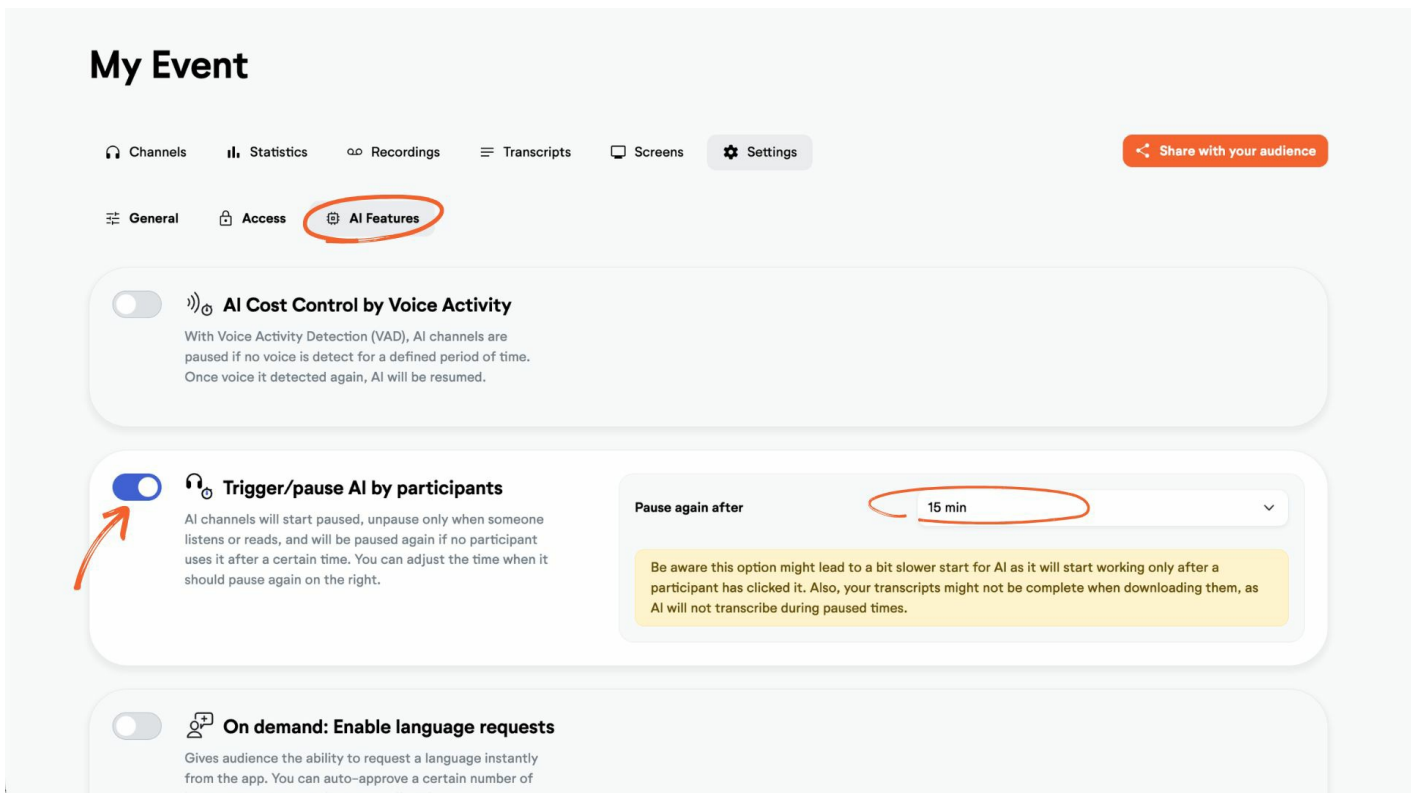

Have AI translation and captions only activated when participants actually use it.

[Features](#)[Live Translation](#)[Guided Tours](#)[Admin](#)

If you turn on this feature, AI channels will start paused, unpaused only when someone listens or reads, and will be paused again if no participant uses it after a certain time.

To activate this feature go to **Event Settings** and then to **AI Features**.

You can adjust the time on the right when AI should pause again after participants stop using it.

General Access **AI Features**

AI Cost Control by Voice Activity
With Voice Activity Detection (VAD), AI channels are paused if no voice is detected for a defined period of time. Once voice is detected again, AI will be resumed.

Trigger/pause AI by participants
AI channels will start paused, unpaused only when someone listens or reads, and will be paused again if no participant uses it after a certain time. You can adjust the time when it should pause again on the right.

Pause again after: 15 min

Be aware this option might lead to a bit slower start for AI as it will start working only after a participant has clicked it. Also, your transcripts might not be complete when downloading them, as AI will not transcribe during paused times.

On demand: Enable language requests
Gives audience the ability to request a language instantly from the app. You can auto-approve a certain number of language requests or approve them manually only.

Be aware this option might lead to a bit slower start for AI as it will start working only after a participant has clicked it. Also, your transcripts might not be complete when downloading them, as AI will not transcribe during paused times.
