

Interpreters: How to use the LiveVoice RSI platform

Learn how to join LiveVoice as an interpreter for remote interpretation.

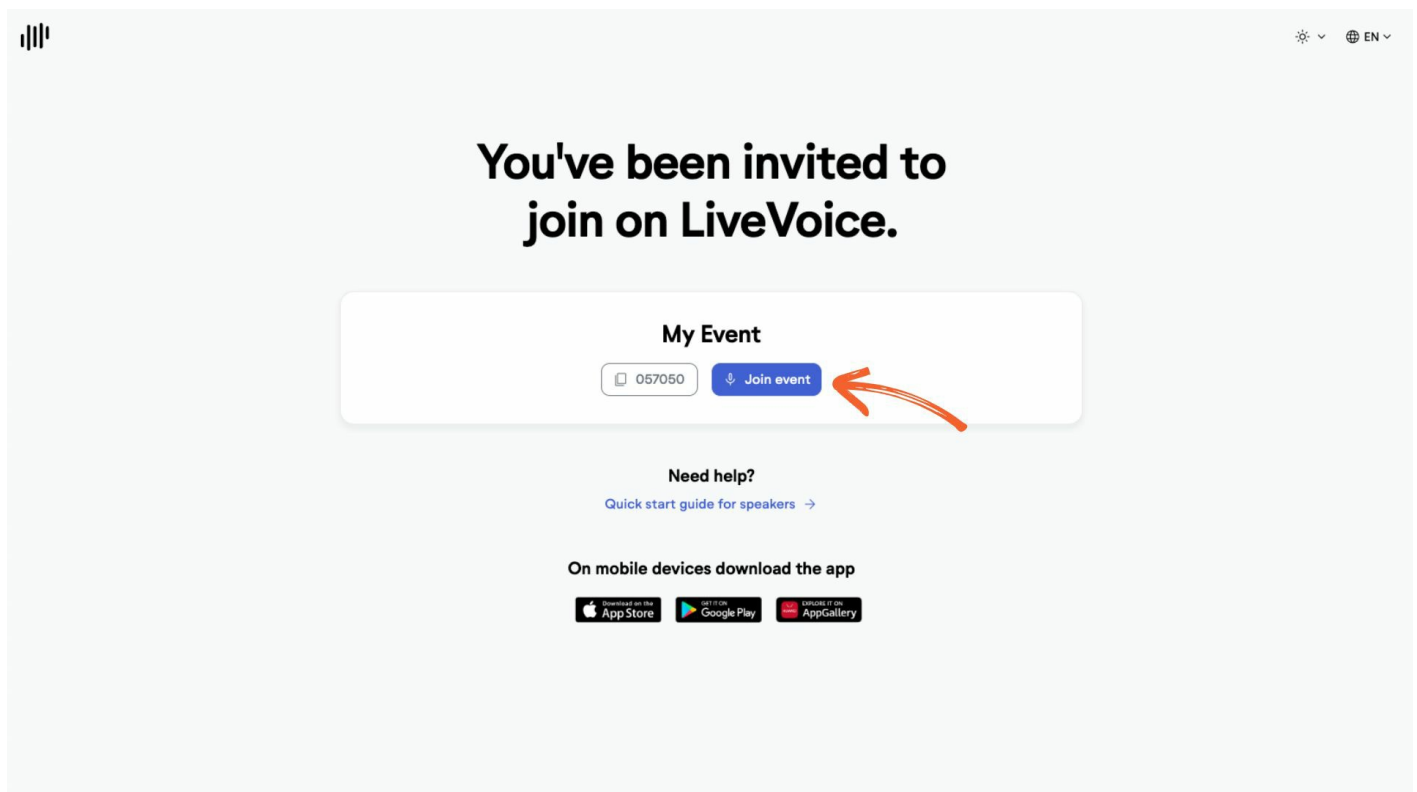

[Basics](#)[Live Translation](#)[Speaker](#)

As an interpreter you will get a **link** or 6-digit code from the event organizer (admin) to join LiveVoice on your computer browser. We recommend to use **chrome**.

Step 1: Join event

Open the link and you will get to the Join page. Click "**Join event**".

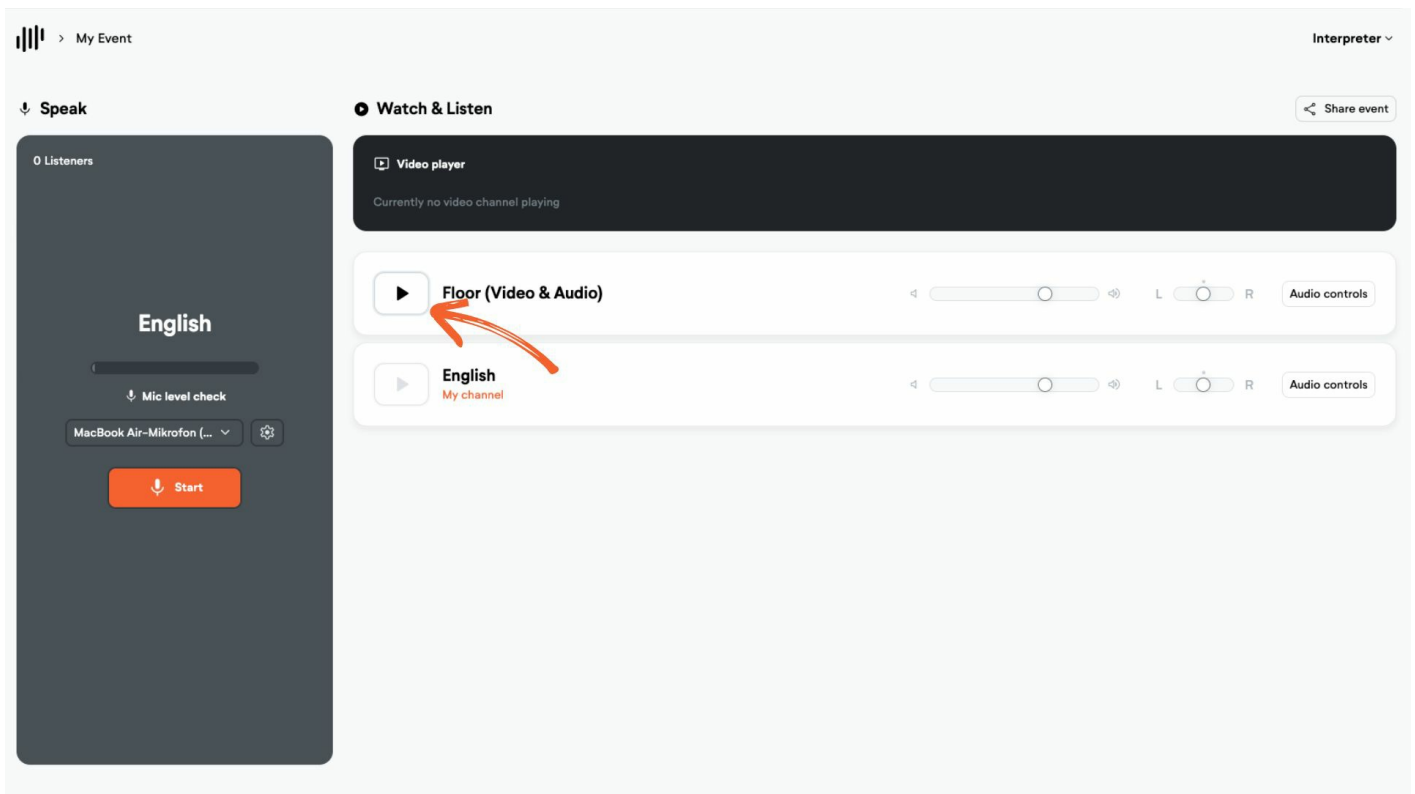

After joining you will be asked for your name. This name is used for the chat function and handover, and will not be displayed to the audience. Choose a name that is understandable for your colleagues.

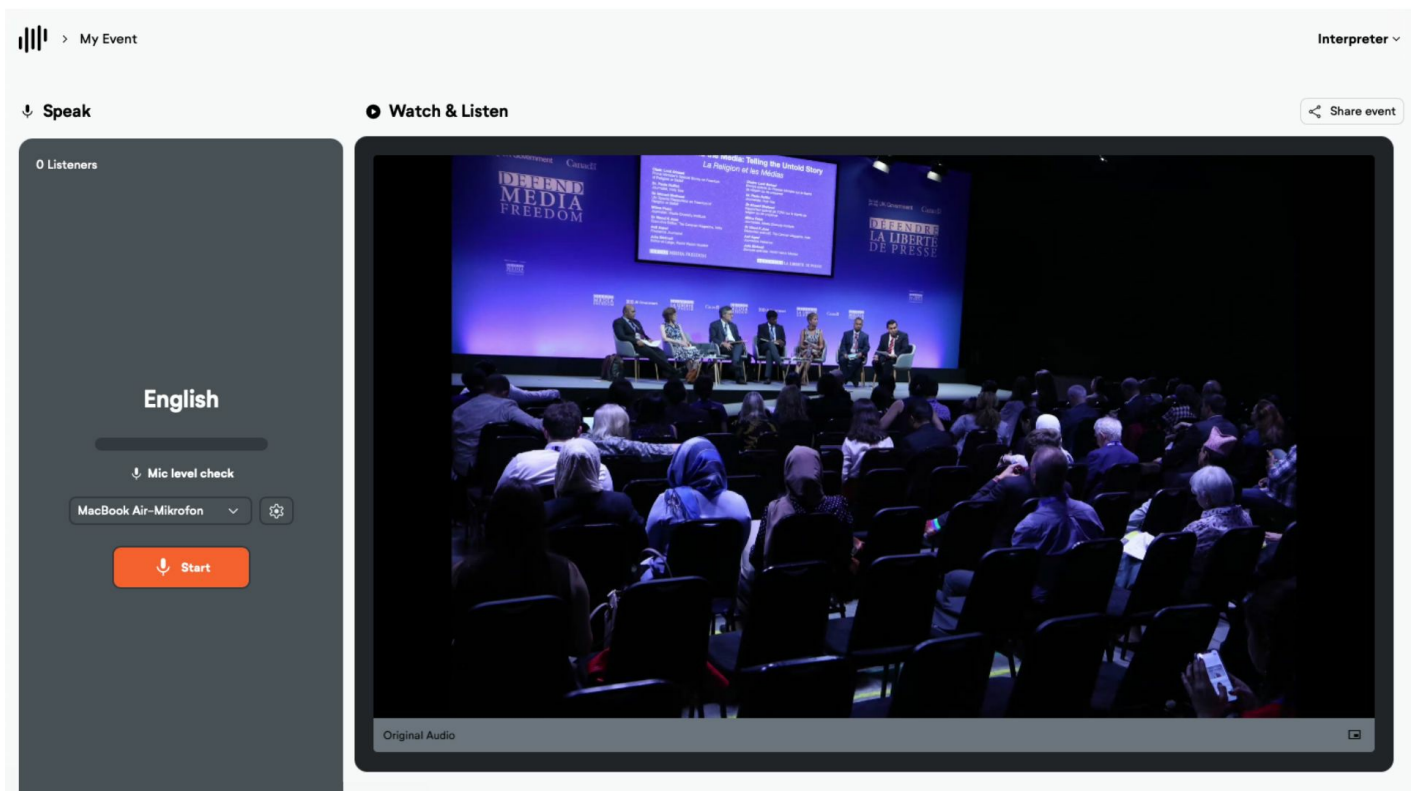

Step 2: Play video

When you enter you have to allow your mic and are now in the "Lobby". On the right you see all channels that you can watch or listen to. When a channel is active the play button turns dark.

To watch and listen to the Floor channel that is sending the stream from stage, click the Play button.

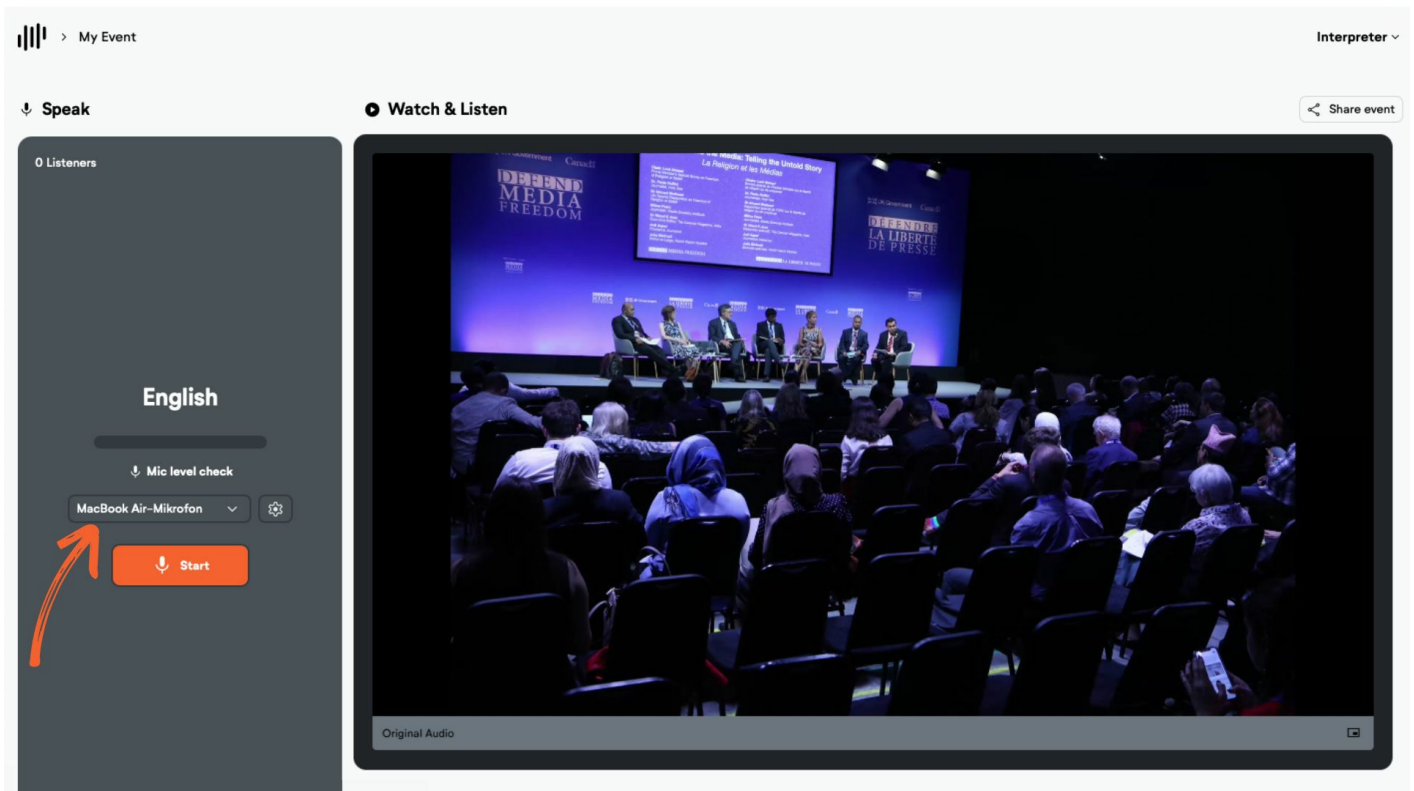

The video will now be visible above the channel.

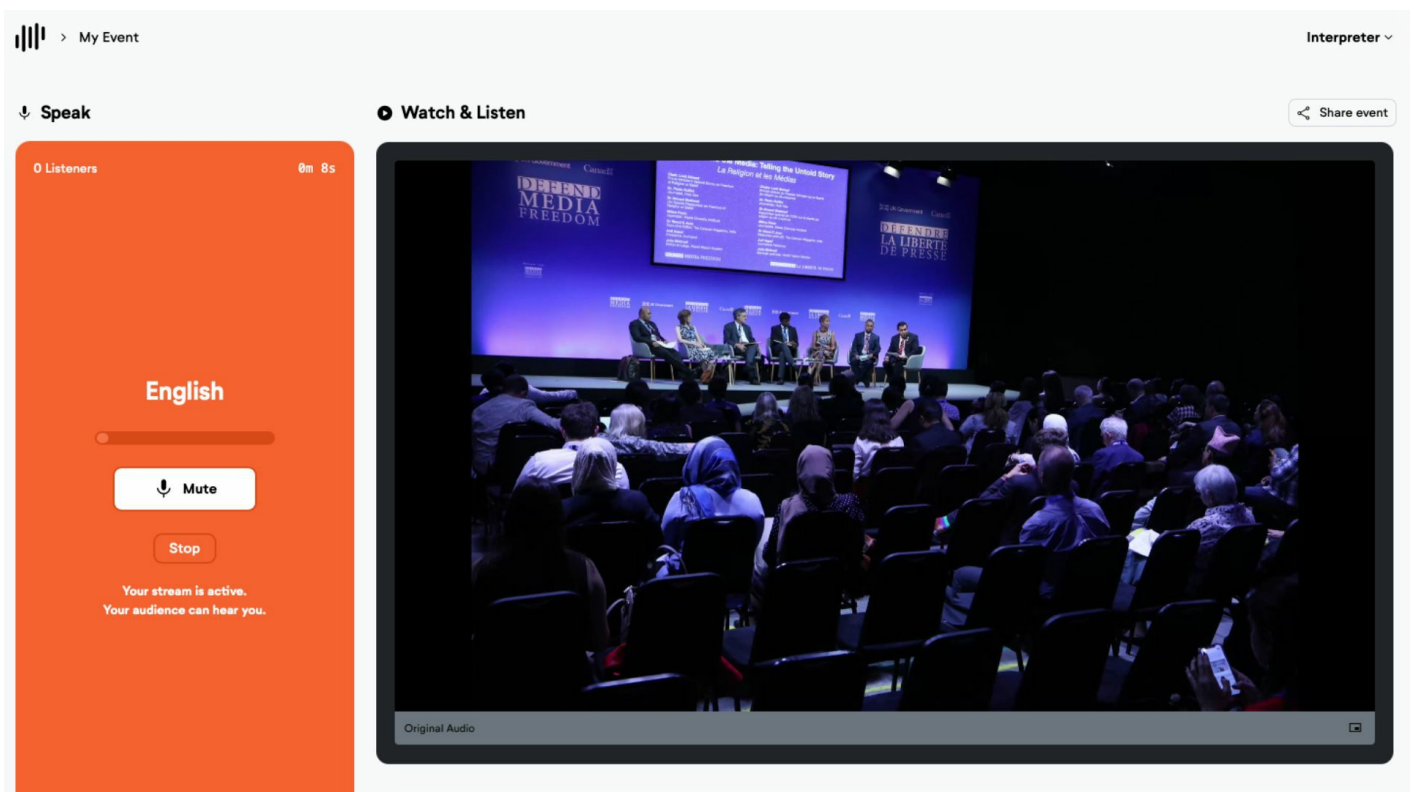

Step 3: Start speaking

Choose your headset as audio input.

Then click "Start". The interface will turn orange to indicate you are live now and the audience can hear you.

Try it out

We have prepared a test event that you can use to familiarize yourself with LiveVoice as interpreter. Please note that this test event only plays audio and no video.
