

How to: Setup for silent conferencing

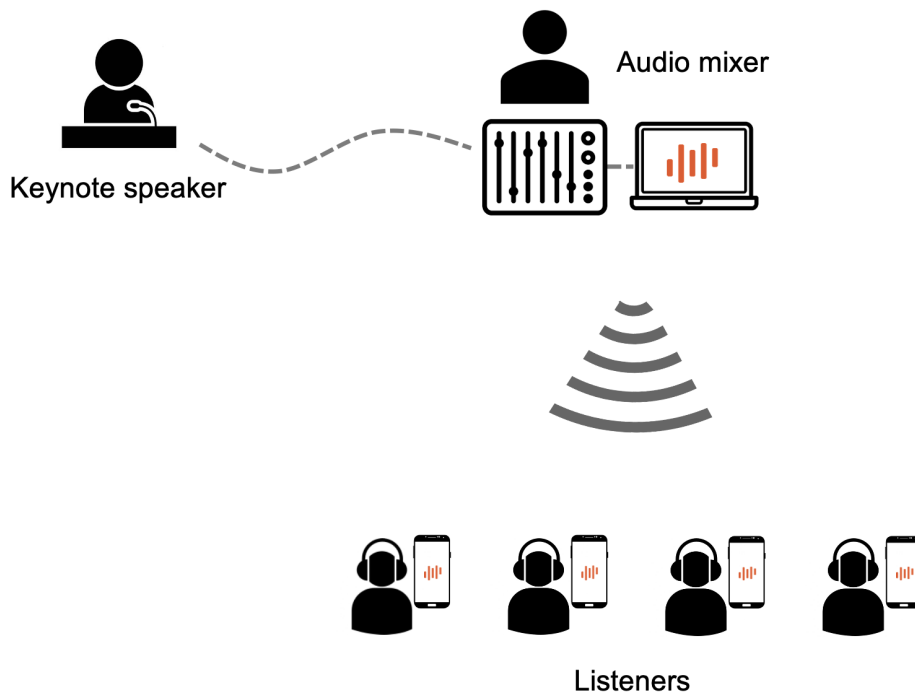

Step-by-step instructions for setting up a silent conference in LiveVoice.

[Basics](#)[Silent Conferencing](#)[Admin](#)

With our simple Bring-Your-Own-Device solution you can set up silent events and other use cases like overflow audiences with only a few steps. Here is what you need to do.

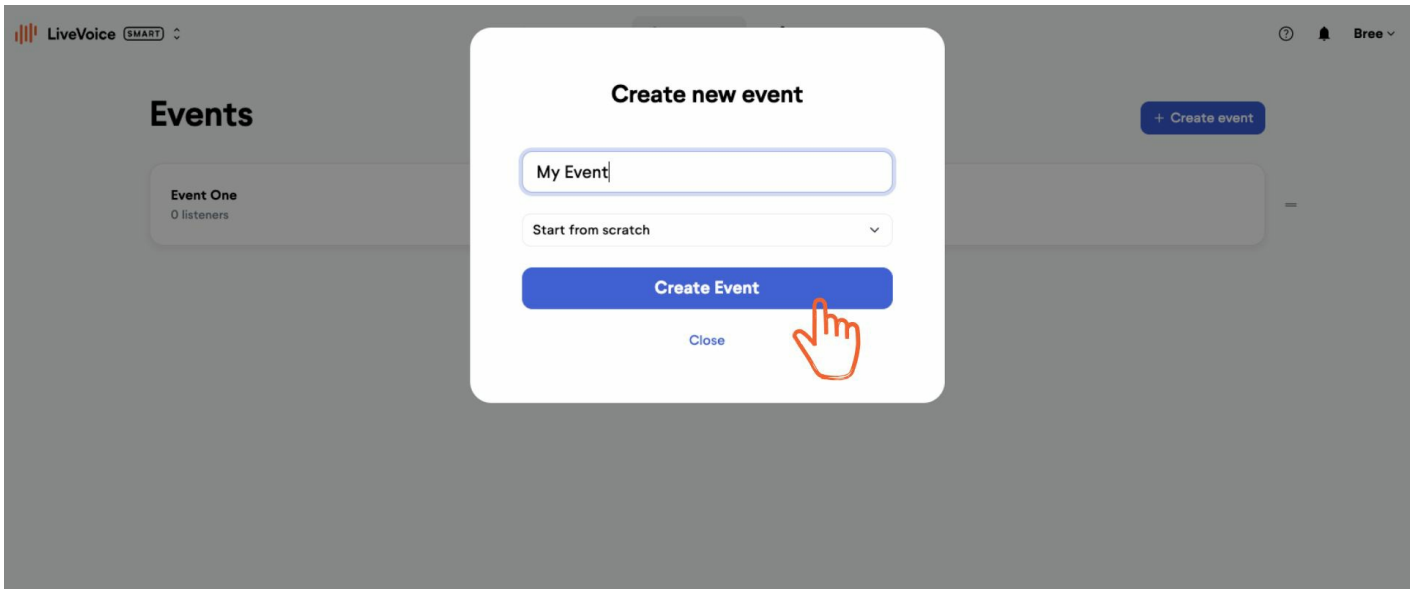

Step 1: Preparation

You will need a computer that will receive the audio from your sound mixer. This computer needs a web browser (we recommend Chrome) and an internet connection as it will stream the audio to the LiveVoice cloud.

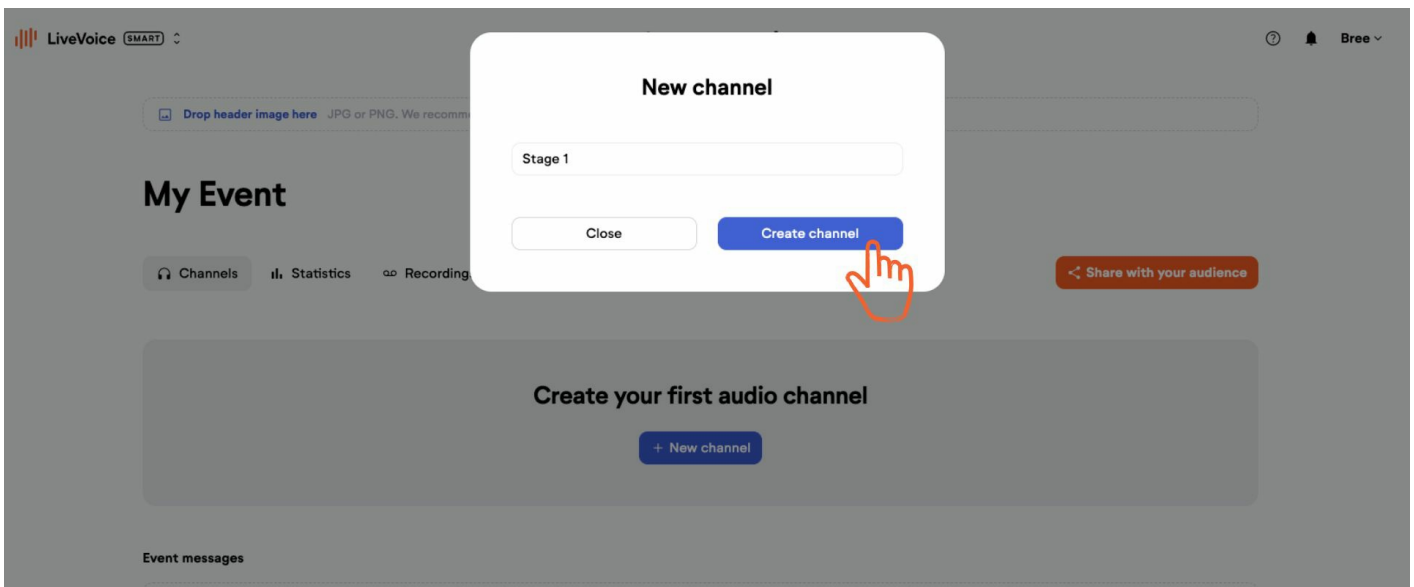

Step 2: Create event

Go to your admin account and create an event.

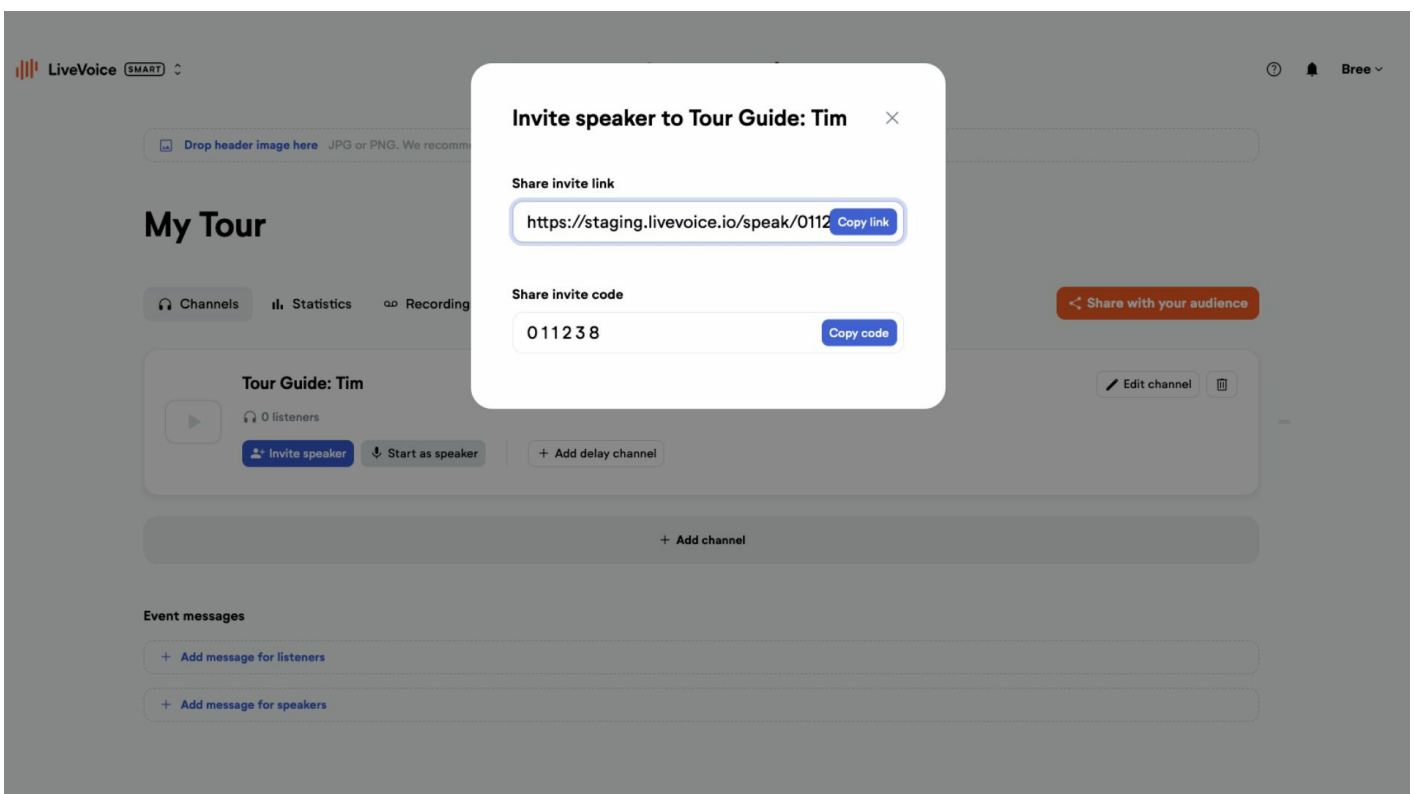

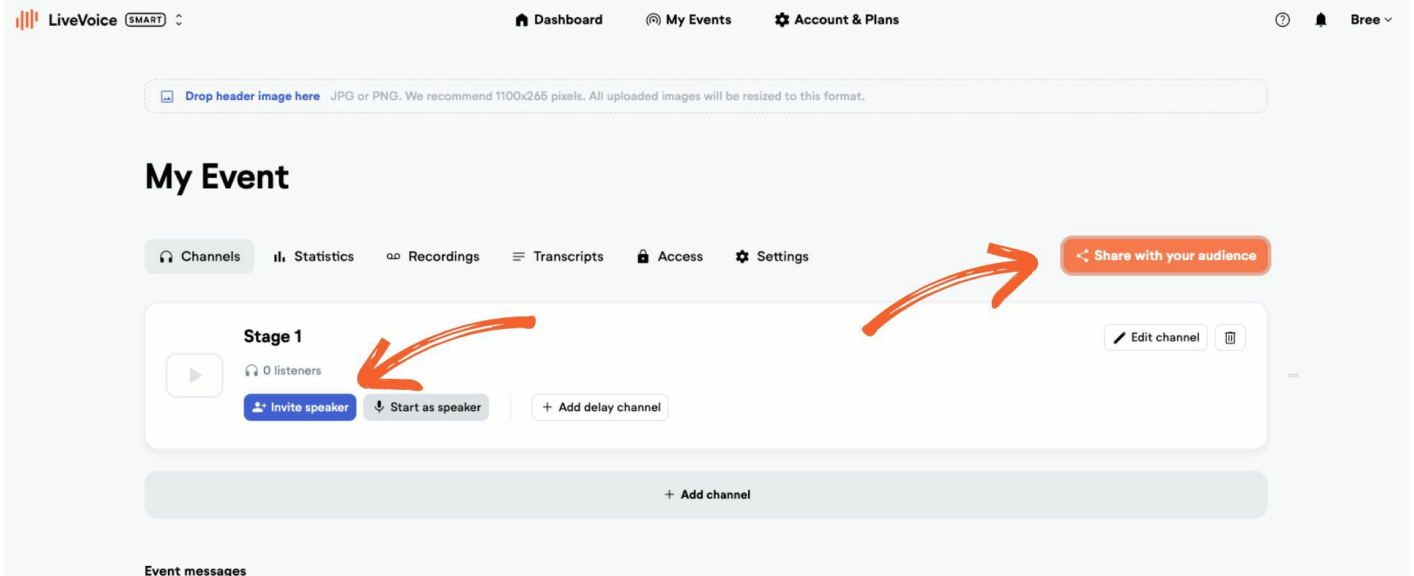

Step 3: Create channels

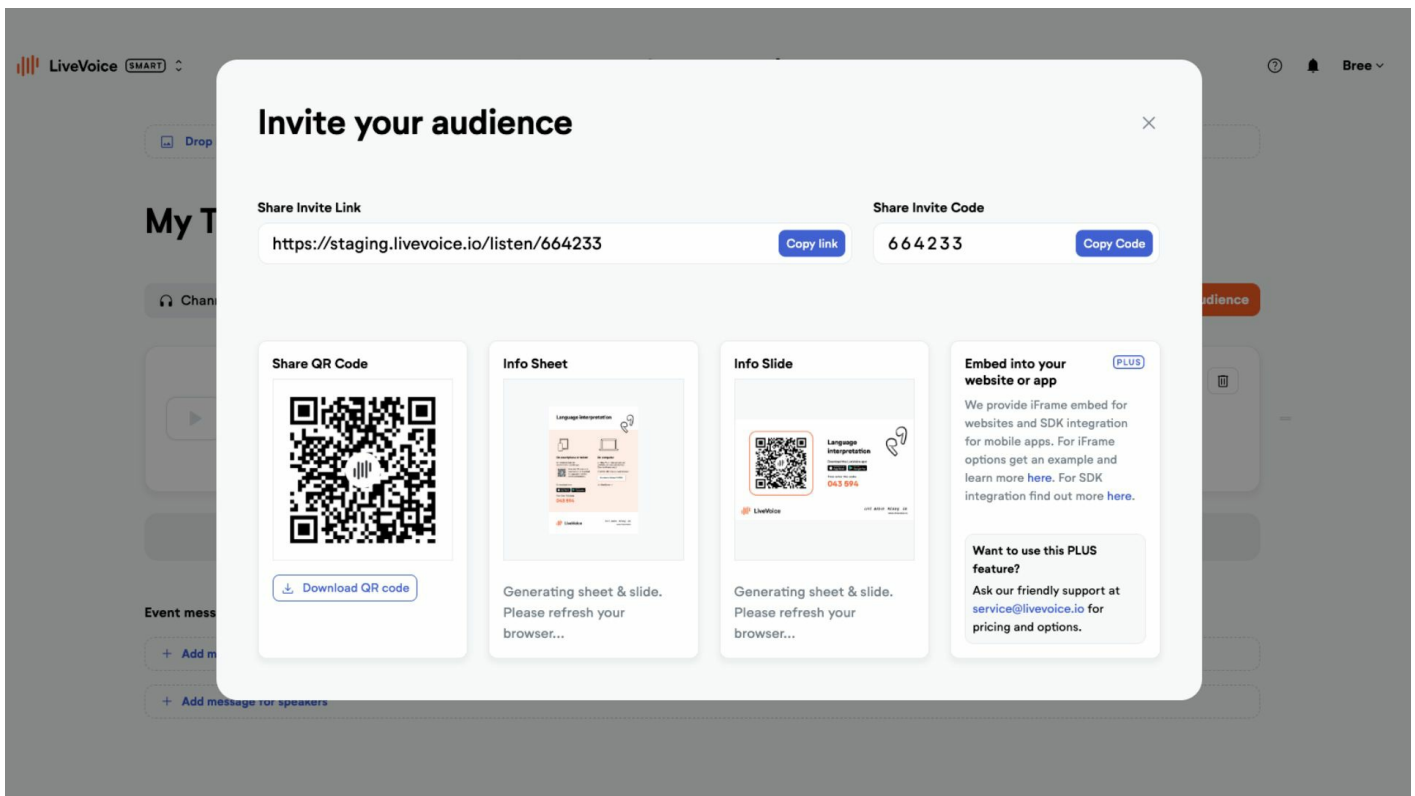

Create one or several channels, giving them the name you want, like the stage name.

Step 4: Share with the audience and AV technician

- Click "Share with your audience" to get the invite options for the audience.
- Click "Invite speaker" to get the invite options for the sending computer.

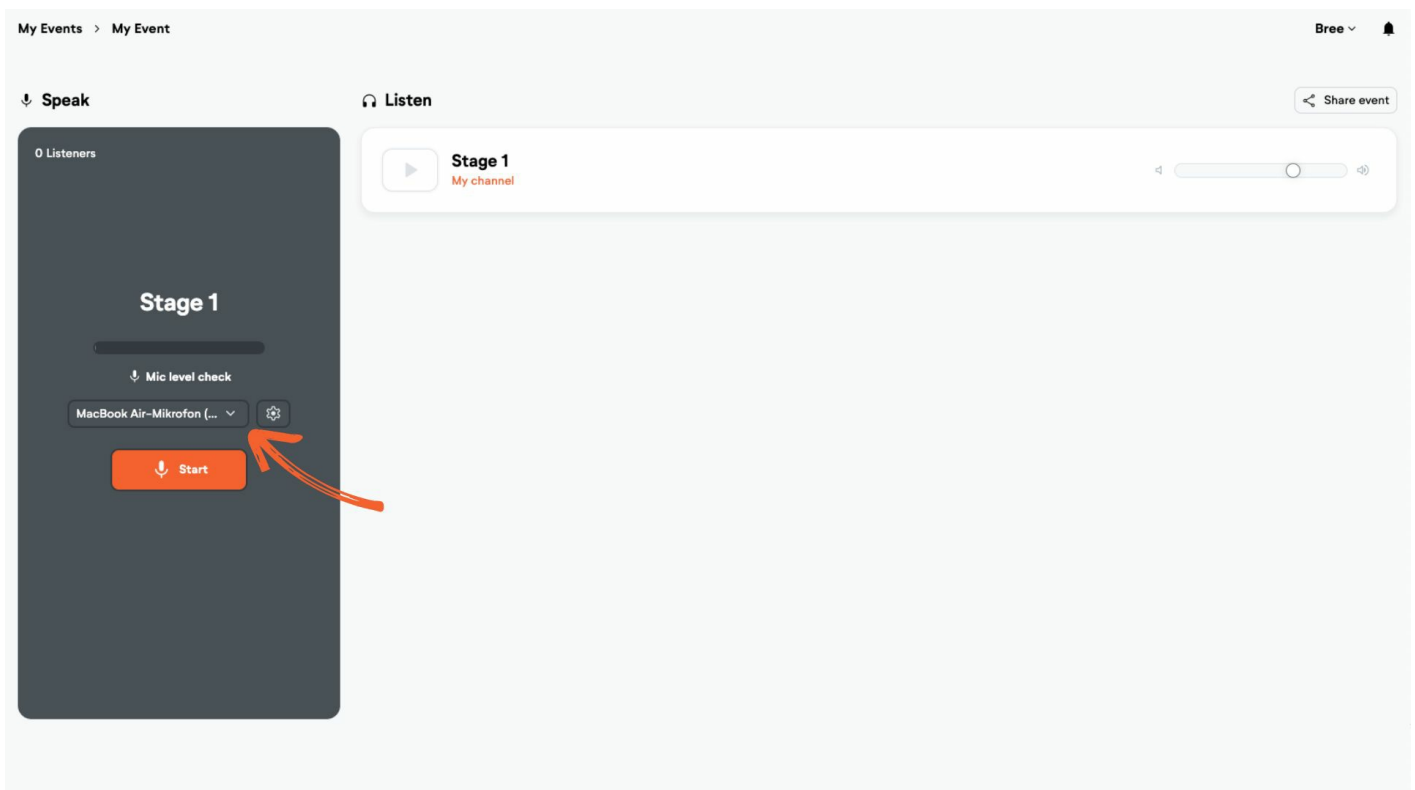

Step 5: Start streaming

On the computer you have prepared, open the speaker link, choose the right input and start streaming.

Make sure to have the right [input audio settings](#).
