

Test Event for Interpreters

Use this test event to learn how to use LiveVoice as an interpreter.

Useful tips

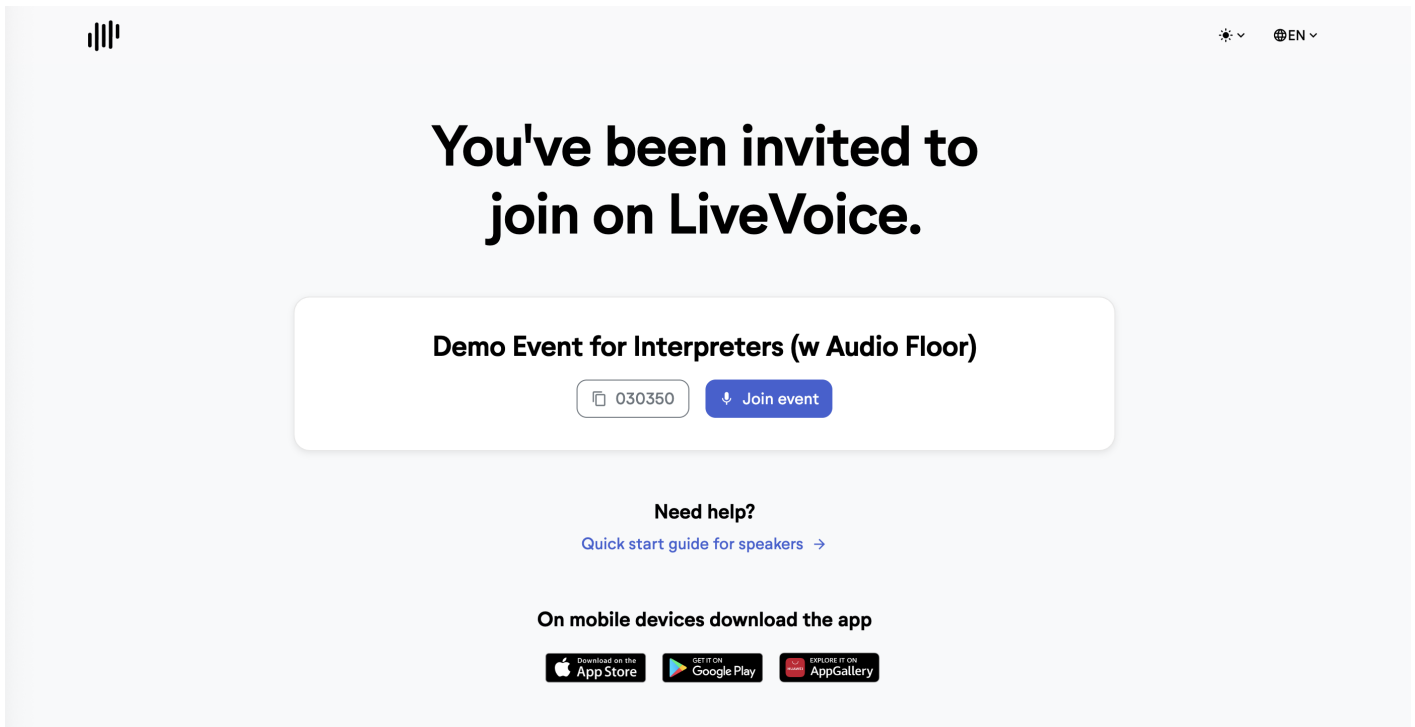

Live Translation

Speaker

Step 1: Open this invite link in a web browser <https://livevoice.io/speak/030350>

Recommended browser: Chrome.

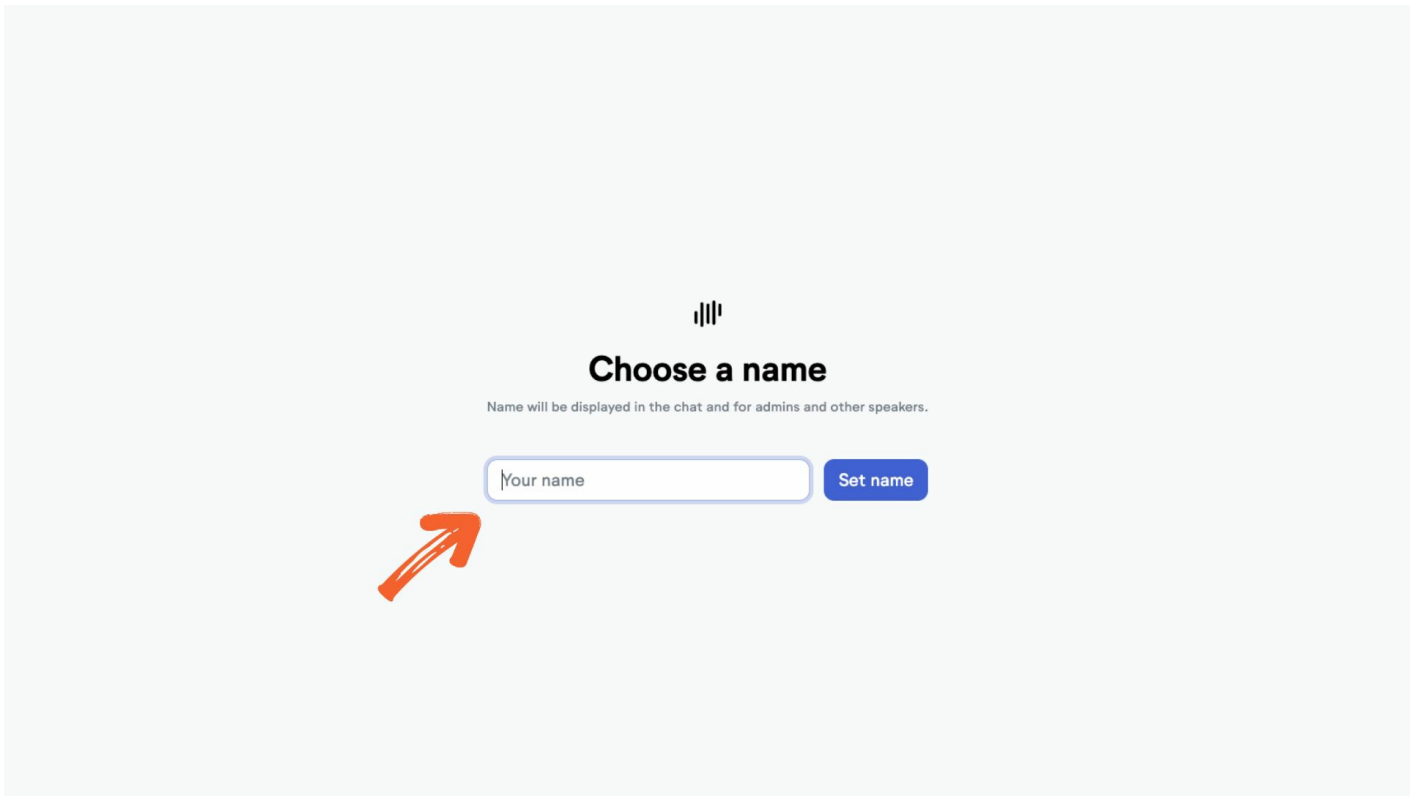

Step 2: Click "Join event"

The screenshot shows a web page with the LiveVoice logo in the top left and a language selector (EN) in the top right. The main heading reads "You've been invited to join on LiveVoice." Below this, a white box contains the event title "Demo Event for Interpreters (w Audio Floor)", a copyable ID "030350", and a blue "Join event" button. Further down, there is a "Need help?" section with a link to a "Quick start guide for speakers" and a section for mobile app downloads with buttons for the App Store, Google Play, and AppGallery.

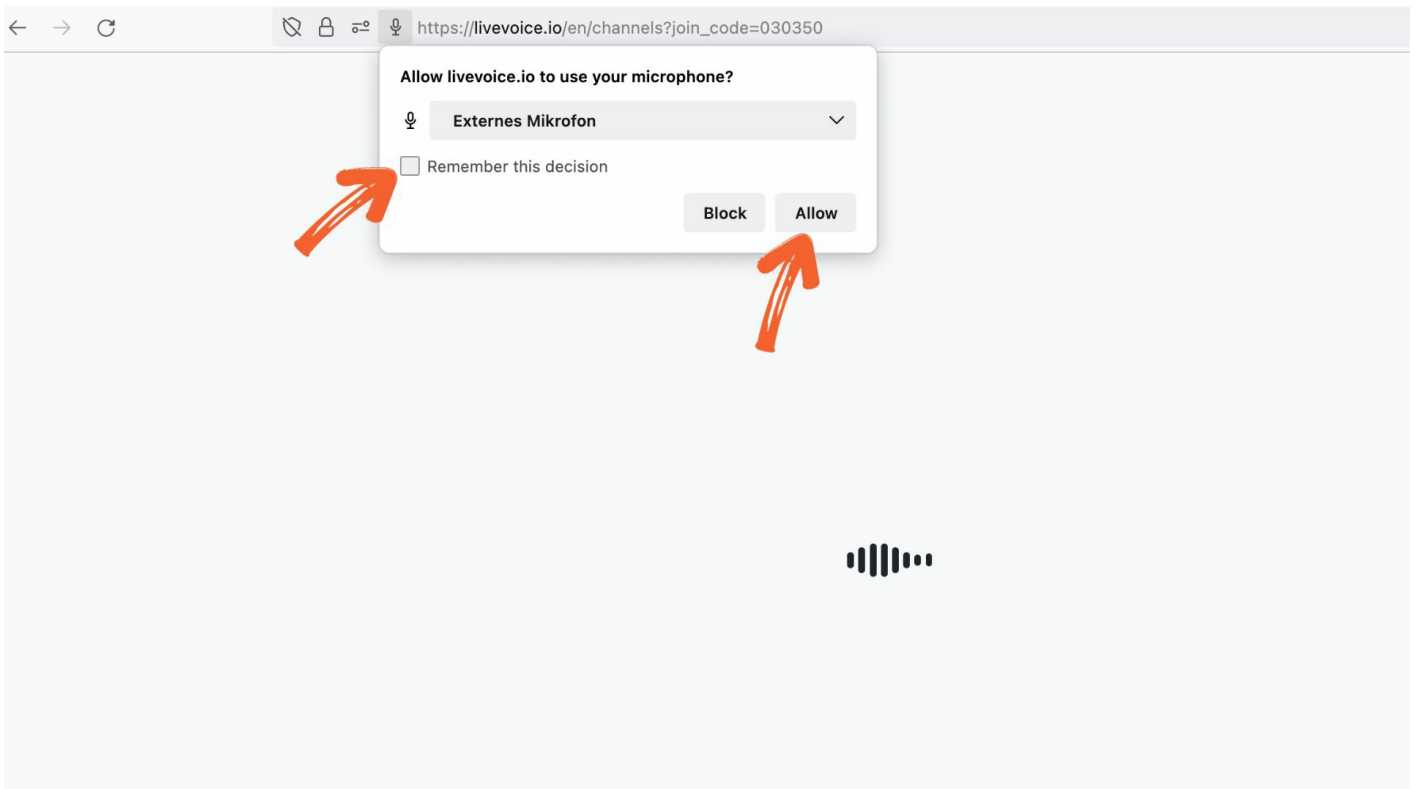

Step 3: Enter your name

The name is only used for internal functions like the team chat. The audience will not see it. Provide a name that is useful for your interpreter colleagues and the event admin.

Step 4: Allow microphone access

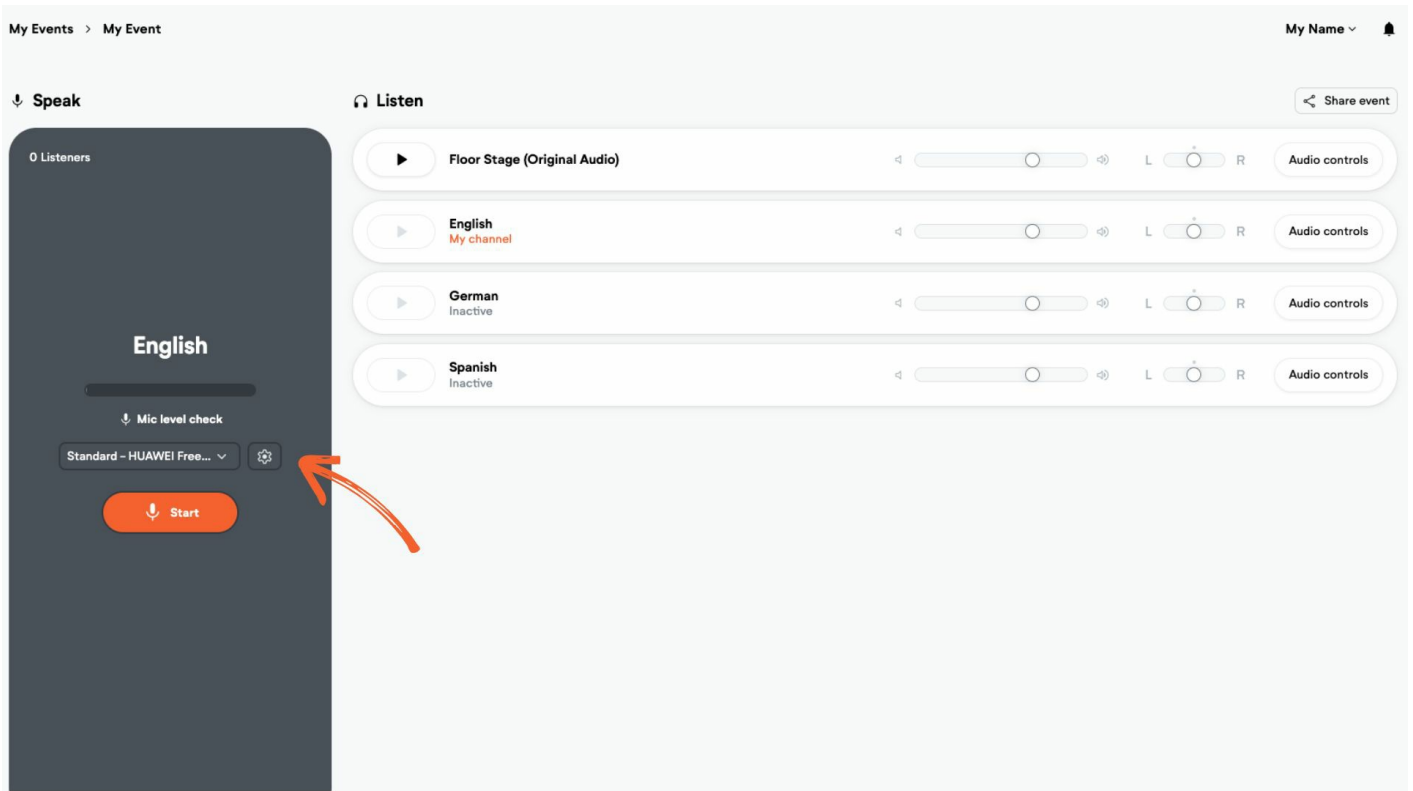

Check the "Remember" box and click "Allow"

Step 5: Choose the right microphone input

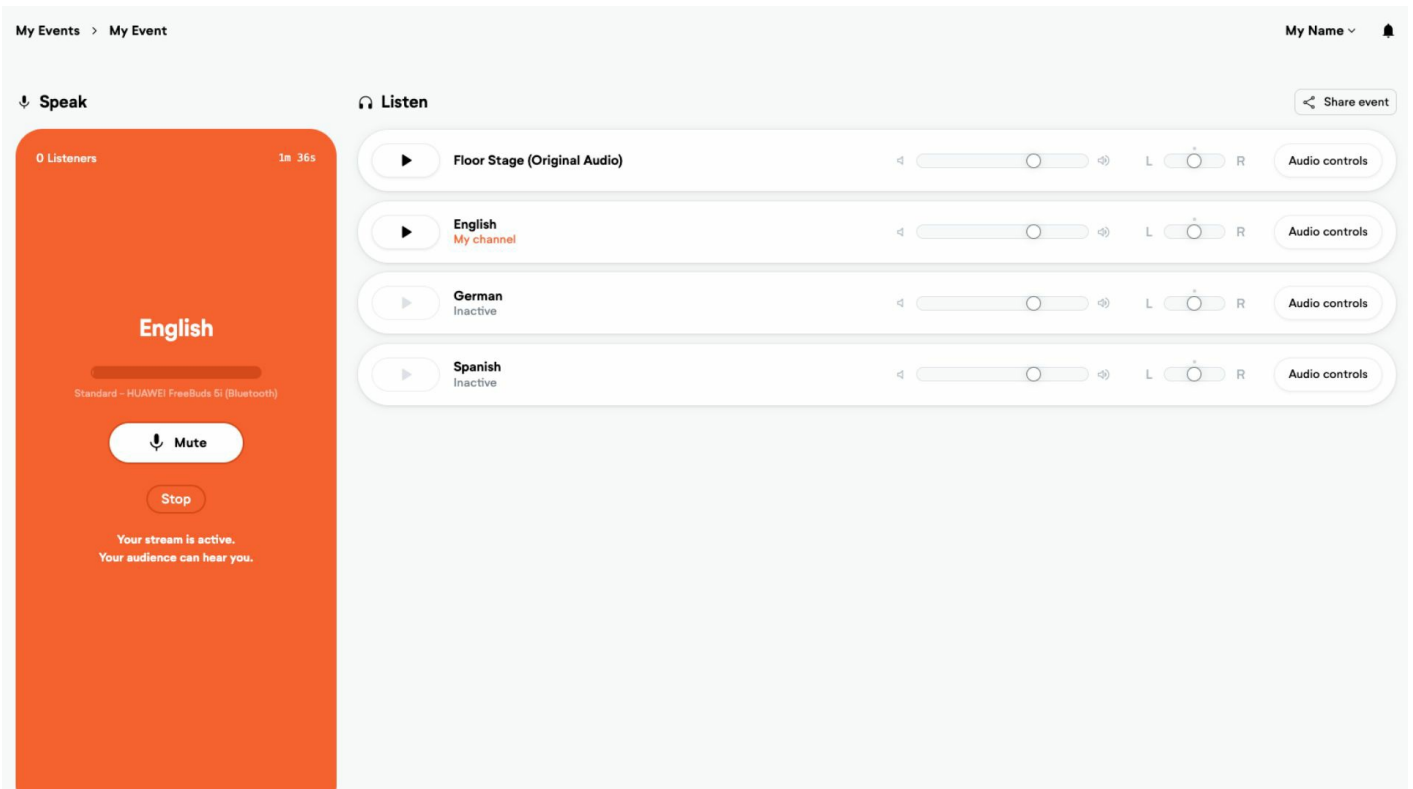

On the left, you see your channel that you will speaking **into**. In the test event it is called "My channel". In the actual event, this will be the name of the language you are interpreting into.

Make sure your headset is selected as audio input in LiveVoice.

Step 6: Click Start

You are live now!

Step 7: Click Play at Floor channel

To listen to the Floor (original audio from stage) click play at Floor.

For this test event, there is an audio loop playing. At an actual event, you will hear the live audio from stage.

Note:For RSI there will also be a video displayed (which is not visible in this demo event).

The screenshot displays the livevoice.io interface for an event. At the top left, it shows 'My Events > My Event' and 'My Name' with a dropdown arrow and a notification bell icon. The main interface is split into two primary sections: 'Speak' on the left and 'Listen' on the right.

The 'Speak' panel (orange background) shows '0 Listeners' and '0m 14s'. It features a large 'English' title, a progress bar, and a 'Mute' button with a microphone icon. Below the 'Mute' button is a 'Stop' button. At the bottom, it states 'Your stream is active. Your audience can hear you.' The audio source is identified as 'Standard - HUAWEI FreeBuds Si (Bluetooth)'.

The 'Listen' panel (white background) is titled 'Listen' with a speaker icon. It contains a 'Share event' button. Below this, there are four audio channels, each with a play/pause button, a volume slider, and 'Audio controls' options for 'L' and 'R'. The channels are: 'Floor Stage (Original Audio)' (paused), 'English My channel' (playing), 'German Inactive', and 'Spanish Inactive'. A red arrow points to the 'Listen' header.
