

Option: Join via geolocation

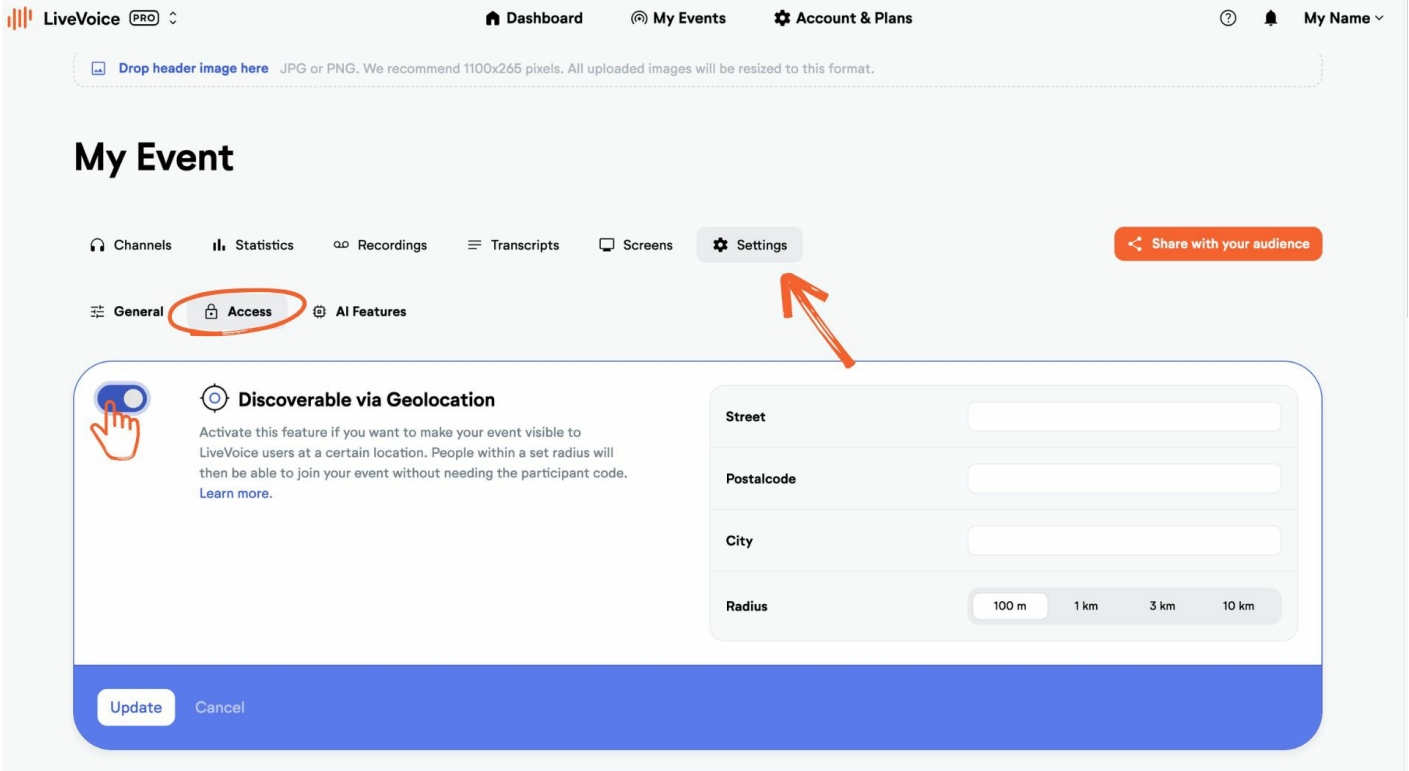

Use geolocation to make your event discoverable in a certain area.

As an event admin, you can enable an option that makes your event discoverable via geolocation. This means your participants who are at the venue and already have the LiveVoice app can click on it and will join without the need for a code or link.

To enable the geo location option:

1. Go to the "Access" tab
2. Turn on the Toggle "Discoverable via geo location"
3. Enter the address
4. Define the radius
5. Click "Update"

Your participants will now see the event popping up on their LiveVoice welcome screen if they have allowed geolocation tracking for the app, and are located within the defined radius. They just need to click on the event name and will automatically join.
