Individual access codes

Distribute individual passwords for participant to make sure only certain people can join.

Features · Live Translation · Guided Tours · Silent Conferencing · Audio Description · Admin
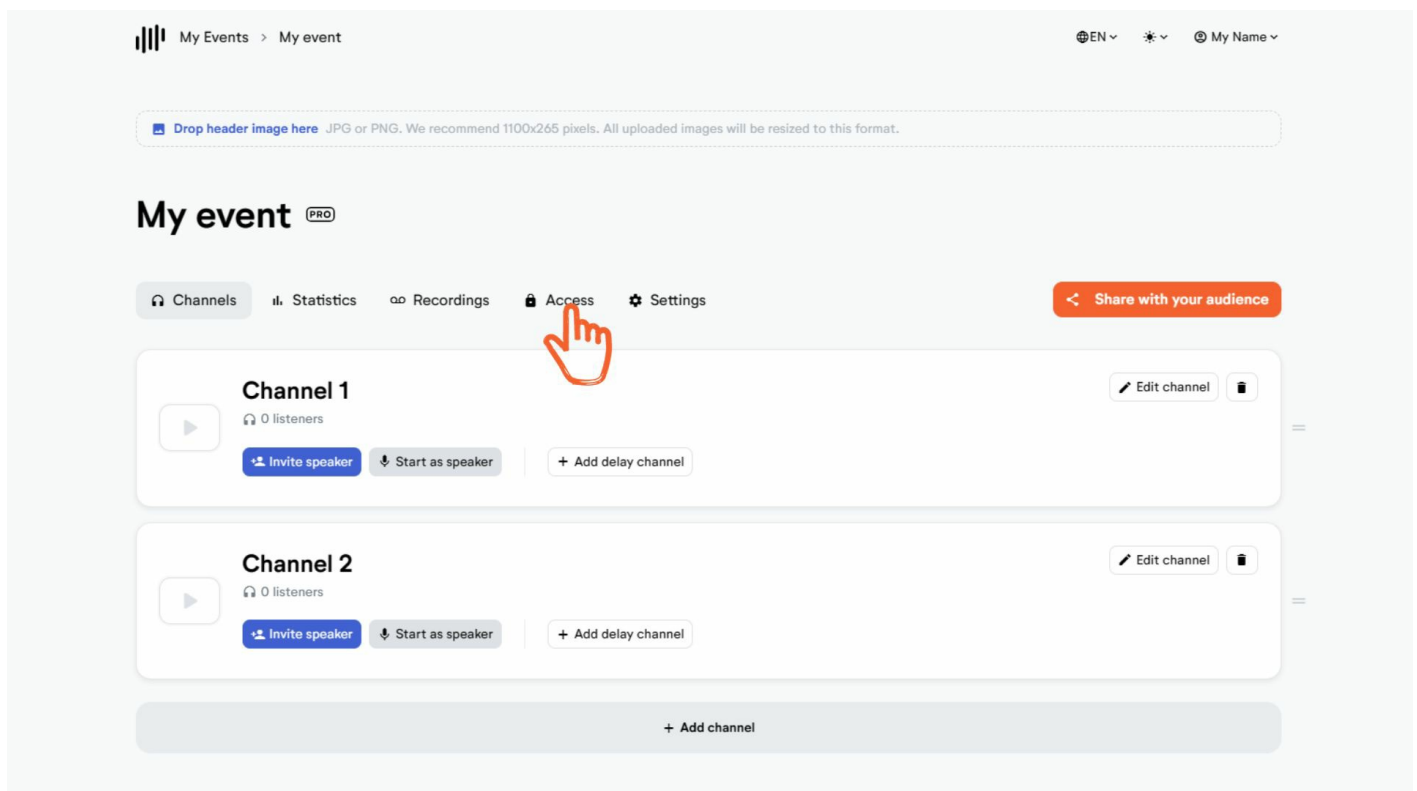

Available in: PRO

Use this feature to ensure only certain people can join your event as participants.

Individual pass codes can be used only by one person with one device. In this way you have full control who can join if you have a high confidential event or if you want to limit it to paid access.

Setup

1: In your admin account go to the "Access" tab of your event.

2: Turn on individual pass codes.

You can either generate codes automatically, or upload your own codes by pasting them into the text field. In this way you can use for example the already existing ticket codes of your participants.

Now, if someone wants to join your event, he will be asked to enter the password.
