

Streaming internal audio with a routing software

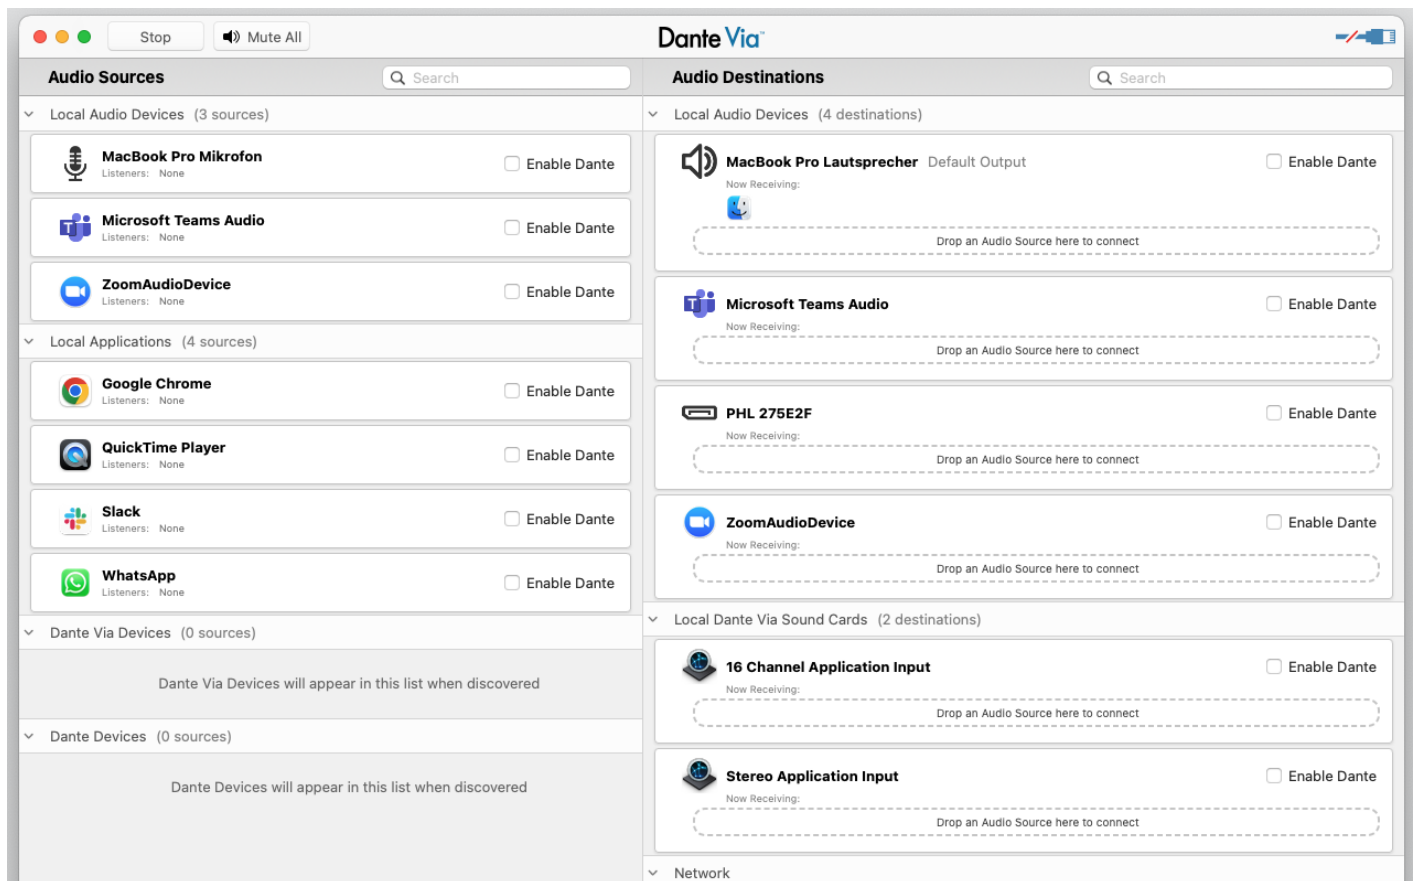

How to use a routing software like Dante Via with LiveVoice.

[Ingest audio](#)[Advanced](#)[Live Translation](#)[Silent Conferencing](#)[Admin](#)

One way of streaming audio from another application on the same computer is using a routing software. There are several routing softwares available. We show you here how it works using **Dante Via**.

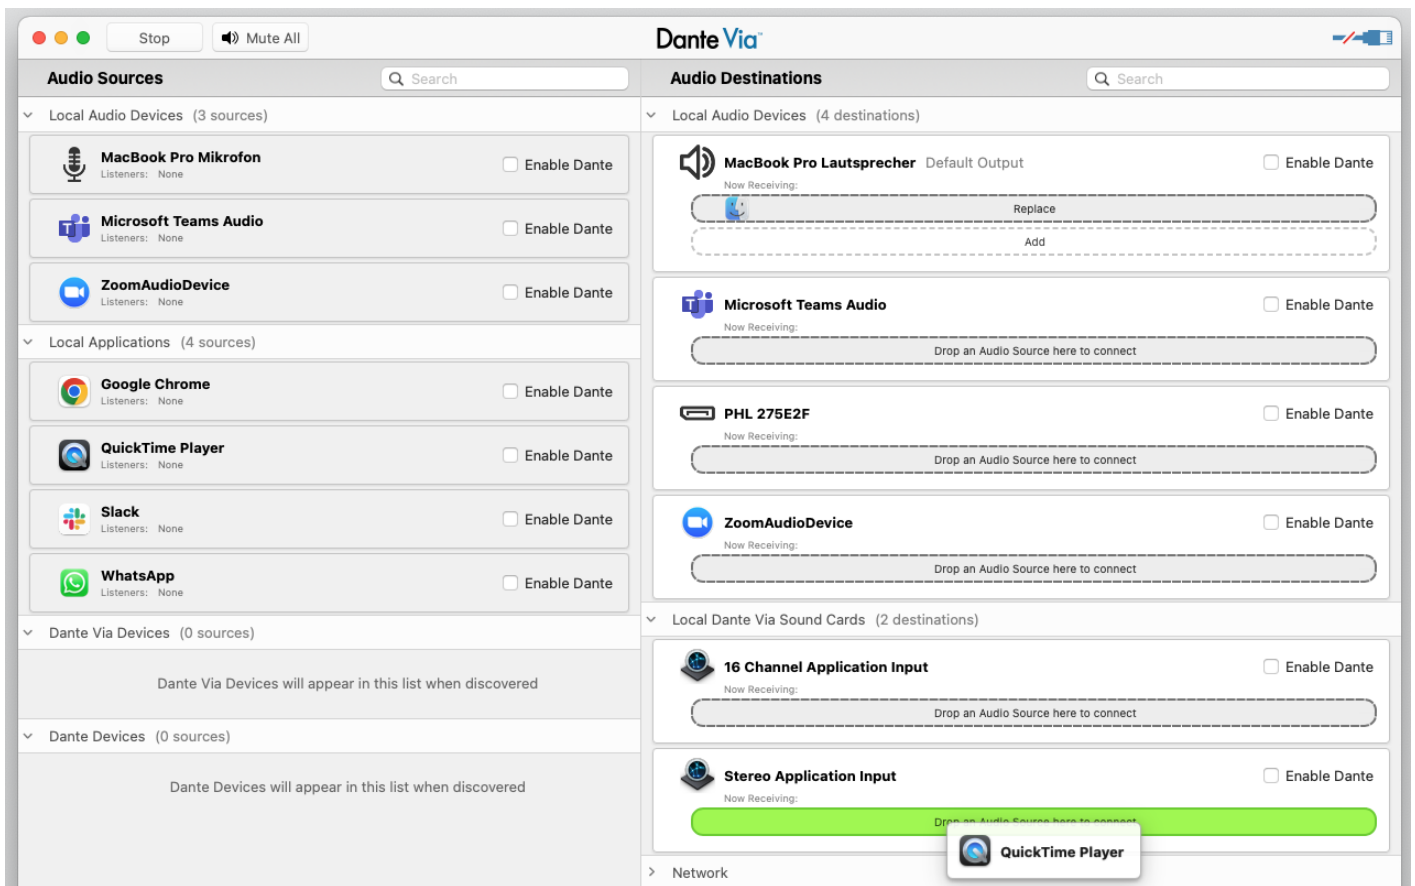

Step 1: Download and install [Dante Via](#)

Step 2: When opening, you see **Audio Sources** on the left and **Audio Destinations** on the right

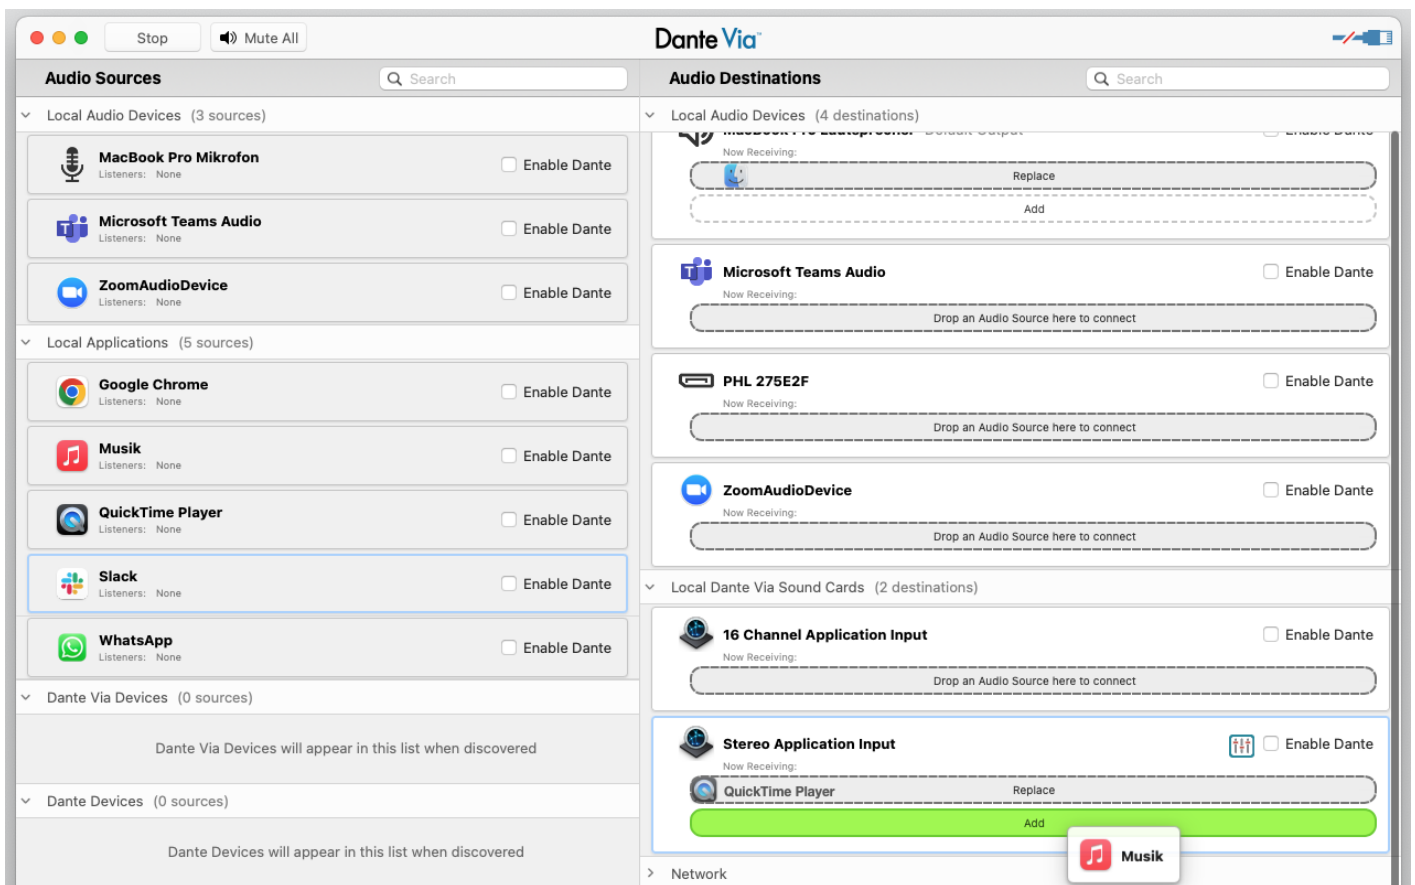

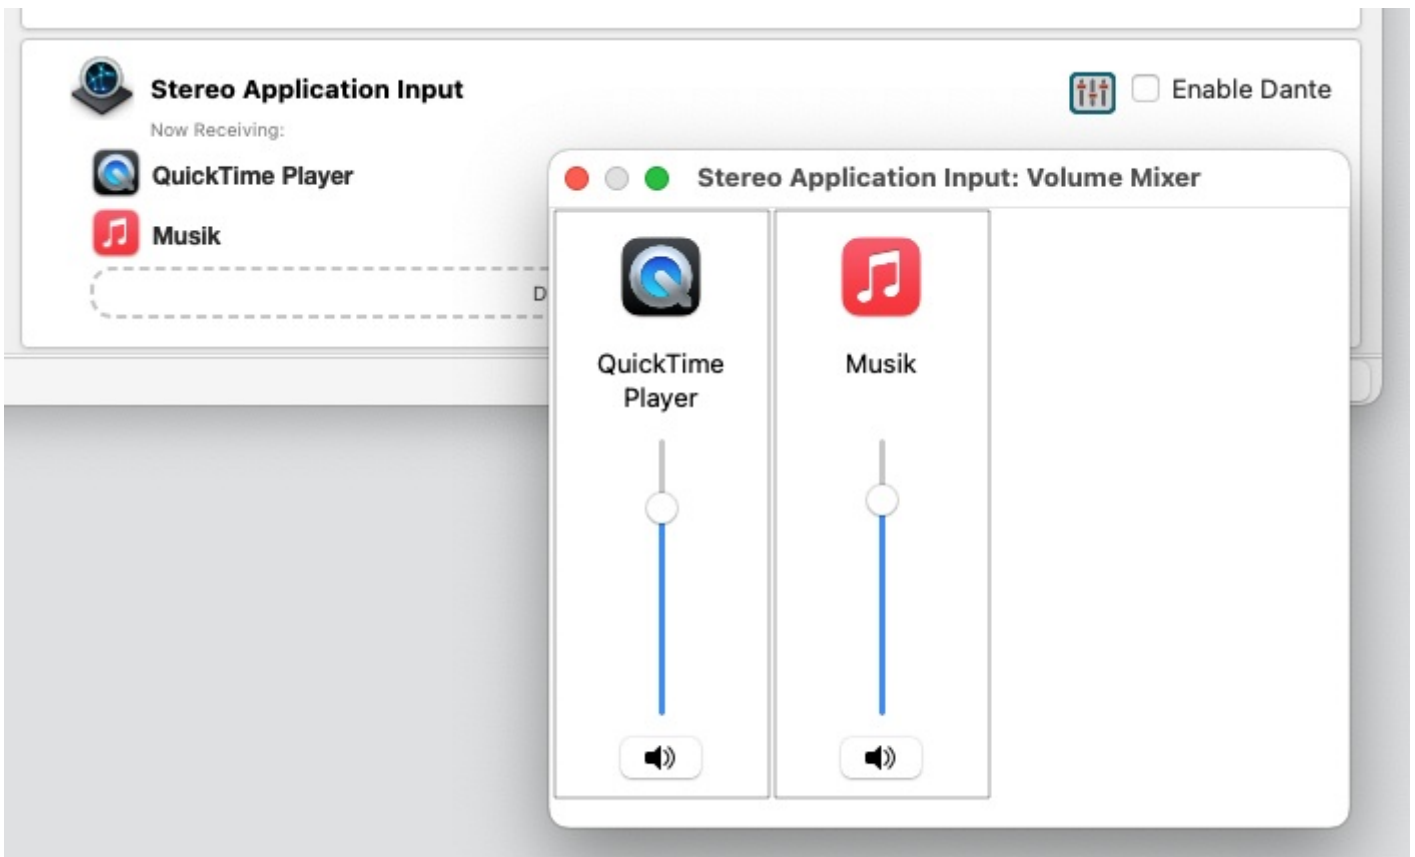

Step 3: Choose the application on the left you want to play audio from and drag it to the Audio Destination "Stereo Application Input"

In our example we drag and drop QuickTime Player.

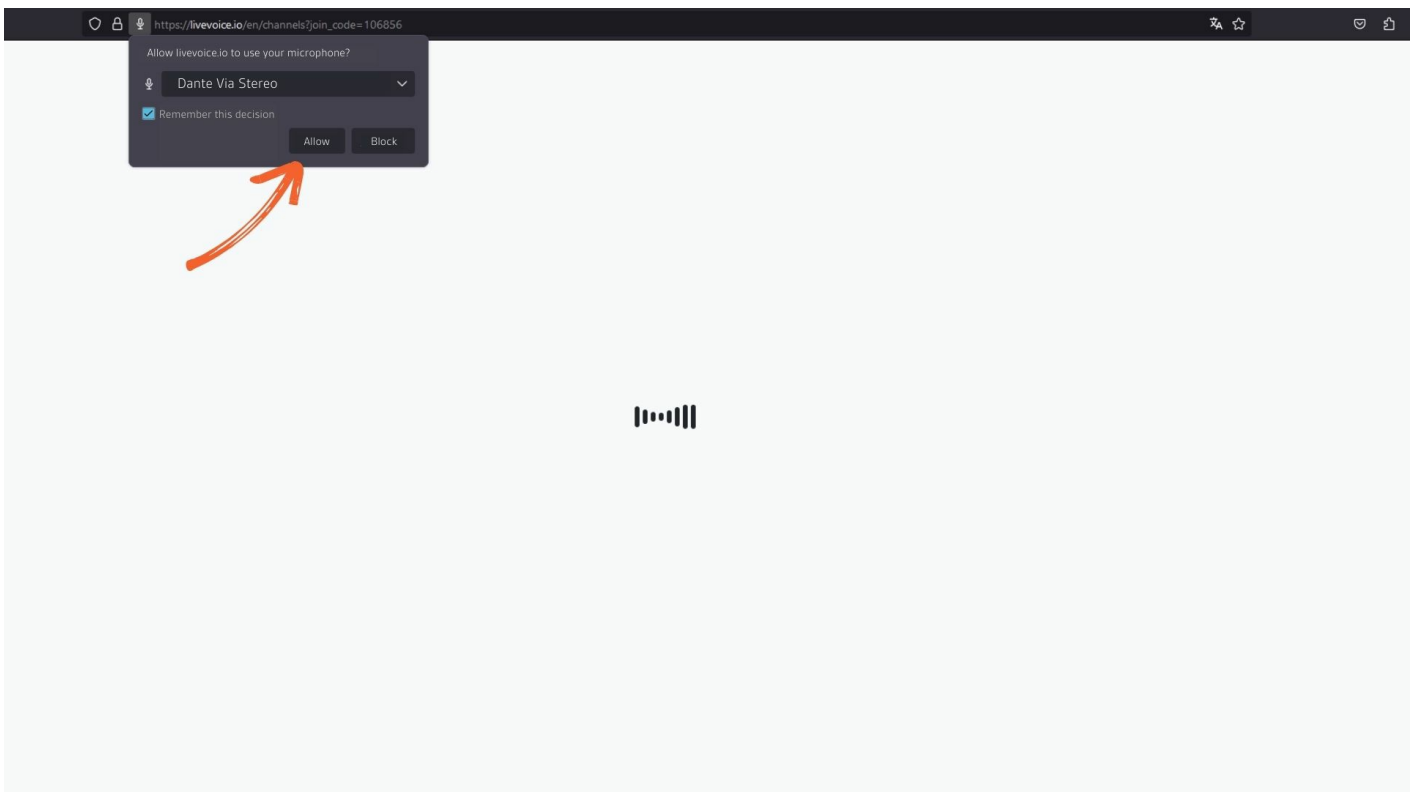

You can even choose several audio inputs and mix them.

Step 4: Open the LiveVoice speaker interface in a web browser. Allow microphone access.

Pro tip: Check the "Remember this decision" box :)

Step 5: Choose "**Dante Via Stereo**" as audio input in the LiveVoice speaker interface and hit "Start".

As an alternative: If you don't want to install a routing software, there are also other ways - [see here](#).
