

LiveVoice tech specs

Need information about technical specifications of LiveVoice? Here you go.

[Tech specs](#)[Live Translation](#)[Guided Tours](#)[Silent Conferencing](#)[Audio Description](#)[Admin](#)

Internet speed requirements

LiveVoice will use very little bandwidth. It's only **0,06 Mbit/s** per user. To put this into perspective: This is 120 times less than a YouTube video.

For example with a **10 Mbit connection**, you can provide LiveVoice to **more than 150 listeners**.

Want to check your connection? Find a [speed test here](#).

Data consumption

With only 0,06 Mbit/s LiveVoice will consume **25 MB per hour per user**.

Latency

LiveVoice has an average latency of just **0.2 seconds**, which is basically real time. Latency might vary a little bit depending on the device, but even old devices will not have much more delay than this.

Browser and smartphone compatibility
